

# Infection risk !

Dear patients!

Due to the increase in corona infections, now also in Bremen, we have introduced some interim changes in our daily practice for your and our safety, as well as our chronically ill children.

1. If you suspect a corona infection in your child or another family member, you **MUST** stay at home and call your family doctor or pediatrician by phone. We will then discuss how to proceed with you.
2. If you have had contact with a patient with proven corona infection or have come back from a risk area, please **DO NOT ENTER** our practice. As previously discussed by phone, please come to your appointment on time and use the infection entrance on the side.
3. Depending on the general condition of your child, a purely telephone contact with our practice is sufficient. Medications such as ibuprofen (nurofen), paracetamol, nasal spray, Vomex ... can also be obtained in a pharmacy without a prescription. With the receipt, we can issue you a prescription at any time, even later, and you will get your money back in the pharmacy.
4. Since we have divided our office hours, for general infection protection, into acute and routine cases (vaccinations, preventive examinations), **patients cannot be treated immediately at any time without prior telephone registration and appointment.** You will be given an appointment for a re-introduction.
5. **If these strict rules are not observed, the virus may spread further and become infected in our practice. In the worst case, the doctors or medical staff fall ill. In these cases, the practice will be closed by the health department and we will then no longer be available to you for a long time.**
